OUR VISION

TO BE THE LEADING GLOBAL PROVIDER OF INFORMATION FOR MOBILE ASSETS

OUR VALUE PROPOSITION

- ✓ We help customers achieve an ongoing return on their investment by:
 - Driving cost savings
 - Increasing safety
 - Improving driver performance
 - Achieving better vehicle utilization
- ✓ Proven track record with over 10 years experience in on-board computers and fleet telematics
- ✓ Global presence with world-wide distribution network (over 75 countries)
- ✓ Flexible, scalable and reprogrammable products backed by a dedicated R&D team
- ✓ Over 600 employees

OUR BUSINESS

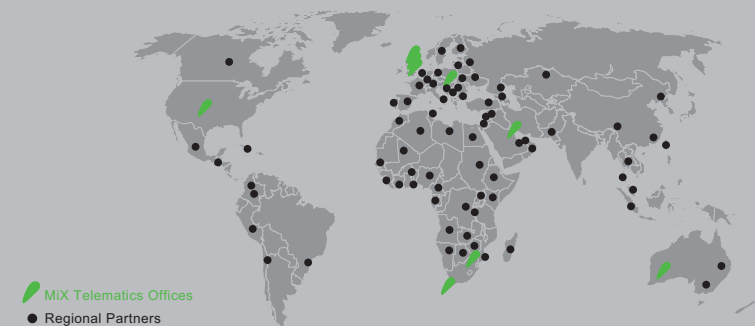

We have built a solid reputation for designing, developing and selling innovative fleet management products and services, primarily in four specific categories:

- ✓ Safety & Security
- ✓ Fleet Management
- ✓ Mobile Resource Management
- ✓ Compliance

Since 1995, our consistent commitment to developing innovative products and services has given us a reputation for high quality, reliable products and resulted in a global installed base of over 450,000 devices.

Our hosted information service platform is capable of delivering targeted information to customers anywhere in the world in a secure and reliable manner. We believe we are on track to achieve our vision of being the leading global provider of information and related services for mobile assets.

OUR GLOBAL PRESENCE

SAFETY & SECURITY

We ensure the safety and peace of mind of our customers through offering a wide range of personal tracking and security products and services to consumers and commercial customers alike.

Private individuals can choose from a range of innovative solutions such as 'crash alert' to enhance their personal safety and the security of their loved ones. The technology we use and our stolen vehicle recovery capabilities are best of breed ensuring we deliver on our promises to locate, track and ultimately recover your vehicle.

We provide commercial customers with information about their drivers' behaviour and driving style, thus flagging poor driving habits and positively influencing driver training programmes. Companies across the world, especially those in the oil and gas industry such as Schlumberger and Chevron, have successfully used this information to reduce accidents, thus saving lives.

FLEET MANAGEMENT

Our state of the art fleet management products provide arguably the most comprehensive range of fleet management and related information available today. Available around the world, the products have stood the test of time and the harshest of conditions.

Aimed at commercially utilised vehicles, typical information includes trip detail such as the driver, fuel used, distance driven, locations visited, routes taken, trip duration, driving speed as well as an almost endless number of customer-defined events such as harsh braking, door open, night-time driving, etc. Critical event information is communicated to the relevant users on an 'as-it-happens' basis via text messages and emails, while more detailed driver and vehicle oriented reports and functionality is available on-line.

Customers are able to enjoy an ongoing return on their investment by improving fuel consumption and reducing fleet operating and maintenance costs.

MOBILE RESOURCE MANAGEMENT

We help companies to increase productivity and bottom line results by providing critical information proactively or on demand, whilst streamlining communication with mobile workers.

Our solutions enable customers to locate and track drivers and vehicles en-route. By integrating with navigation and messaging devices, we enable safe and cheap communication between drivers and the office, thus also helping to ensure drivers don't get lost.

As a result, our customers are able to significantly improve their customer service by easily identifying the driver closest to a customer site, more accurately predicting estimated arrival times, ensuring clear and specific job instructions and better managing routes and delivery schedules.

Our customers are also able to reduce communication costs, improve productivity and earn more revenue through better vehicle and driver management.

COMPLIANCE

We offer a range of controls and reports to help customers keep track and ensure compliance, where applicable. Our solutions enable Fleet Managers in various countries including the USA, Australia, and parts of Europe to regulate driving/working hours to ensure compliance with local working hour legislation.

The driver safety information offered by our products also helps ensure compliance to QHS&E policies and standards.

Another solution that falls within the category of Compliance is Carbon Emission reporting – information highlights which drivers are driving inefficiently thus emitting the most carbon. Reports may be used to prove compliance with pollution laws and help achieve a reduction in carbon footprint.

By managing and reducing carbon emissions, fuel consumption is reduced thereby helping customers achieve compliance and achieve savings in fleet operating costs at the same time.

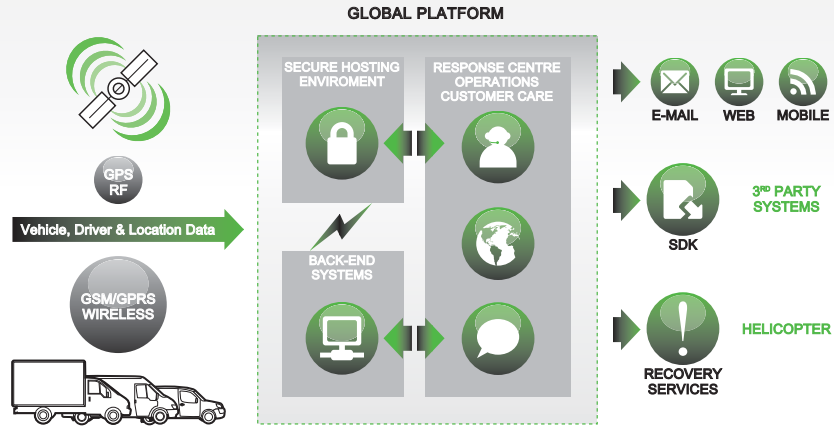

“Our customers are people not vehicles”

“You can't manage what you don't measure”

“Improve customer service and achieve bottom line savings”

“Objective information, accurately reported”

OUR INFORMATION SERVICES

Behind the scenes, MIX Telematics takes care of the data transfer, administration and management of your vehicle data, whilst an extensive security model ensures the right information is delivered to the right people, at the right time.

By subscribing to MIX Telematics' secure web-based service, you can view and manage your information in a secure manner with a web browser, anywhere, anytime. Information can also be delivered to your e-mail inbox or mobile phone.

- ✓ Secure hosting facilities
